

Portal:State Exam Topics in Hygiene and Epidemiology (1LF, GM)

You can print all the articles here as a book.

You can load it, generate a PDF or ODT file, let a book printed, edit it or otherwise update its content. Just follow this link: Create a book!

PLEASE NOTE that the examination questions below are a version valid BEFORE the academic year 2012/2013. Current list of questions is available on the Faculty Student Information System (SIS).

1. Health Issues of Traffic Emissions.
2. Environment and health. Effects on the Population's Health Status..
3. Health Effects of Air Pollution on Man.
4. Environment Pollution and Human Exposure, Biological Monitoring.
5. Primary and Secondary Emissions, Imissions. Emergency Situations.
6. Exposure of Man to Dust and Aerosols; Health Hazards, Prevention.
7. Hygienic Issues of Solid Wastes
8. Carcinogenicity of chemical substances and of physical factors in the environment. IARC Classification.
9. Genotoxic Substances, their Effect on Health.
10. Maximum Admissible Concentrations of Harmful Substances. Combined and Complex Exposure to Harmful Substances in the Environment.
11. Issues of Day Lighting, combined illumination. Visual Stress.
12. Issues of Artificial Illumination, Typical Sources. Visual Stress.
13. Joint Lighting, Glare.
14. Types of Noise, Adverse Effects on Humans.
15. Units Describing Human Noise Load in Living and Working Environment. Adverse Noise Effects, Prevention and Protection.
16. Microclimate (temperature, humidity, air velocity) and its effect on health.
17. UV Radiation Types, Ozone Layer Depletion, Prognosis of its Evolution.
18. Biological Effects of UV Radiation, Protection.
19. Biological Effects of Non-ionizing Radiation (thermal, non-thermal). Typical Sources, Health Protection.
20. Laser Issues. Types, Use, Health Hazards, Health Protection.
21. Ionising Radiation (basic terms, stochastic and non stochastic effects).
22. Adverse Effects of Vibrations on Humans, Prevention.
23. Hygienic Requirements on Working Environment, Categorization of Working Operations, main Parameters and Criteria.
24. Risk Analysis at Work, Health Risk Assessment and Management.
25. Physiological Evaluation Methods of Work and Thermal Organism Loads. Types of Work. Work of Special Groups (pregnant women, adolescents, elderly people, and disabled persons).
26. Exposure Assessment at Work. Exposure Limits.
27. Workplace Visits, Consultation Activities of a Physician for Enterprise, Health Promotion.
28. Medical Fitness-for-work Assessment, Preventive Medical Examinations.
29. Work Load and Musculoskeletal Disorders.
30. Toxic Metals in Living and Occupational Environments.
31. Organic Solvents in Working Environment. Chemical Safety Report.
32. Professional Hazard in Health Services.
33. Health Issues in Agriculture.
34. Chemical Compounds in Buildings (sources, health risks, prevention).
35. Biological Risks in Buildings (types, adverse health effects, prevention).
36. Radon.
37. Health Risks in Indoor Environment. Sick Building Syndrome.
38. Hygiene and Epidemiology. Basic terminology, history, definition.
39. Misuse of Addictive Substances (especially alcohol, medical and illegal drugs).
40. Epidemiology of Tobacco Dependence - prevalence, morbidity, mortality in the Czech Republic and globally.
41. Different Forms of Tobacco Use.
42. Tobacco Dependence Prevention.
43. The Role of Health Professionals in Tobacco Dependence Treatment, Treatment Possibilities
44. Life Style and Cardiovascular Diseases, Risk Factors.
45. Stress, Importance for Health. Mental Hygiene.
46. Current Dietary Guidelines for Healthy Population.
47. Assessment of Nutritional Status of Population Groups and Individuals.
48. Role of Various Food Groups in Human Nutrition.
49. Role of Lipids and Carbohydrates in Human Nutrition (sources, excess, deficiency).
50. Role of Protein in Human Nutrition (sources, excess, deficiency).
51. Role of Minerals in Human Nutrition (Ca, P, Mg, Na, K): sources, excess, deficiency.
52. Role of Trace Elements in Human Nutrition (Fe, J, Cu, Cr, F, Se, Zn): sources, excess, deficiency.
53. Fat Soluble Vitamins (sources, role, excess, deficiency).
54. Water Soluble Vitamins (sources, role, excess, deficiency).

- 55. Role of Micro-organisms in Foods.
- 56. Food Contaminants (xenobiotics).
- 57. Child Feeding; Importance of Breast-feeding.
- 58. Alternative Diets.
- 59. Diseases Caused by Excess or Deficiency of Nutrients (especially obesity).
- 60. Food Safety Requirements at Catering Establishments Including Health Facilities.
- 61. Soil Health Risks. Health Issues of Children Sand Pits, Natural Swimming Places and Swimming Pools.
- 62. Drinking Water - quality requirements. Bottled Water.
- 63. Individual Sources of Drinking Water. Water Treatment in Emergencies or Field Conditions.
- 64. Mass water Supply. Drinking Water Issues in the Czech Republic.
- 65. Water Related Health Hazards.
- 66. Allergens in the Environment. Health risks, prevention possibilities.
- 67. Epidemiology of Accidents; Prevention Possibilities.
- 68. Basic Health Indicators (morbidity, incidence, prevalence, mortality, fatality rate).
- 69. Primary, secondary, and tertiary prevention.
- 70. Descriptive Studies.
- 71. Analytical Studies.
- 72. Experimental Studies.
- 73. Population Sample, Statistical Induction Principle
- 74. Measures of Central Tendency and Variability. Normal (Gaussian) Distribution
- 75. Fourfold and Contingency Tables
- 76. Association, Correlation and Regression Measuring
- 77. General Procedure of Hypotheses Testing, Level of Significance
- 78. Attributable and Relative Risks, Odds Ratio
- 79. Requirements at Examination Methods, Sensitivity, Specificity, False Positivity, False Negativity
- 80. Primary Prevention of Common Chronic Diseases
- 81. Malignant Tumours – Trends in Incidence, Mortality. Role of Cancer Registries
- 82. Risk Factors of Cancer, Prevention Possibilities
- 83. Process of Infection Propagation: Characteristics
- 84. Source of Infection
- 85. Process of Infection Propagation: Transmission of Etiologic Agents
- 86. Susceptible Organism in the Process of Infection Transmission
- 87. Alimentary Infections
- 88. Airborne Infections
- 89. Vector-born Infections
- 90. Infections of Skin and Superficial Mucosa
- 91. Blood Transmitted Infections
- 92. Anthroponozoonoses
- 93. HIV/AIDS Epidemiology
- 94. Nosocomial Infections – Prevention, Repression
- 95. Risk Factors of Nosocomial Infections
- 96. Preventive Anti-epidemic Measures
- 97. Anti-epidemic Measures in the Focus of Infection, Surveillance
- 98. Sterilization - importance, methods
- 99. Disinfection - importance, methods
- 100. Active and Passive Immunization, Vaccine Types
- 101. Immunization in Your Country
- 102. Immunization in the World - Current Problems
- 103. Immunization in Traveling Medicine
- 104. Evidence Based Medicine, Role of Epidemiology – Evidence Hierarchy
- 105. Risk Factor and Confounding Factor, Definition and Examples
